

## Senior Software Developer

---

### About Uplogix

Uplogix develops next-generation remote management solutions that deliver virtual management capabilities throughout distributed enterprise networks. As a software developer, you will be involved in all stages of software development: refining requirements, designing, building, testing, and fixing bugs for our product line.

Our products include Envoy and EMS. Envoy is a custom hardware device running a Java application on Linux. Envoy manages network devices (routers, switches, firewalls) through their console port. Our Envoy Management Server (EMS) is a Java web application which utilizes Struts, Tomcat, and Oracle. EMS handles configuration, monitoring and reporting for hundreds of Envoy units.

### Key Responsibilities

- Design/Build/Test core features
- Fix existing bugs
- Implement network device interactions
- Work with product management in defining features
- Assist in all QA processes
- Re-factor existing code to reduce bug count and increase maintainability

### Key Qualifications

- BS in Computer Science or Computer Engineering
- 5+ years professional Java experience
- Comfortable working in Unix (Linux or OS X) environment
- Comfortable re-factoring others' code and having your code re-factored

### Desirable Qualifications

- Experience using enterprise switches, routers, firewalls
- Experience building/debugging Linux modules
- Struts, Hibernate, Castor, JDBC, and/or Web Services experience
- Oracle, Postgres, and/or Hypersonic experience
- Database schema design and administration
- Candidate should possess the ability to learn quickly with little direction or oversight

### Additional Information

Candidates must be authorized to work in the US as permanent residents. We are not offering relocation or sponsorship.

Please send your resume and cover letter to [careers@uplogix.com](mailto:careers@uplogix.com) or fax to 512.857.7002. No phone calls please.
